

Plan for Next Lab

Established Connection with Database and Created Some Table:

We created a database named “quickjob” which has some tables to store data/information.

Sign in/up for all the users:

We designed a sign in page for “Admin” and also designed a sign in/up page for (Job seeker, and Company). Jobseekers can register with their email and then log in to apply for a job and a company can also register and then log in to post a job.

Form Validation

Forms are validated with regular expressions.

The Job post: We created a page named job post where a Company can post a job.

Job Search: We created a page named jobsearch where a jobseeker can search for a job based on some filters.

Furthermore, all types of users can see the total number of published jobs.
